Jules Zhou

AI Agent Engineer · Full-Stack Developer

Lomé, Togo · Open to international remote work | juleszhou01@gmail.com | +228 70 41 88 80 | portfolio-terminal-lake.vercel.app

github.com/iruzen-dono | x.com/iruzendono

Summary

Developer focused on AI agent tooling. I build the layer agents run on — persistent memory, context engineering and tool use — in Python and TypeScript. Author of memory-vault (Portable Context Protocol) and Hermes Project Oracle, and contributor to the Hermes agent runtime. 31 pull requests across 8 open-source repositories, 9 merged.

Open-source contributions

Contributor, Agent runtimes & LLM platforms – GitHub (remote) June 2025 – present

31 pull requests against 8 external repositories, 9 merged. Most of the work targets agent runtimes and LLM application platforms.

- hermes-browser-extension — 6 merged PRs on the Hermes agent runtime: surfacing subagent batch results after the turn stream ends, model picker correctness, activating the context-cache plugin, /meta command and UI polish.
- Flowise — an LLM application builder, 5 PRs: pinning the Docker image to the release tag, direct variable names in overrideConfig for Agentflow, full RediSearch special-character escaping, duplicate chatflow creation on rapid save clicks.
- Medusa — merged PR: handling deleted stock locations in the admin order fulfillment section.
- Directus, Saleor, PostHog, Dify — primary-key deduplication in the permissions count check, blocking account reactivation after staff deactivation, UTC timestamps on the /events endpoint, consistent created_at/updated_at timestamps.

Projects

memory-vault — Portable Context Protocol May 2026 – present

Packages AI agent sessions into reusable .hermes-memory packs so context travels between models and machines — the memory layer an agent rehydrates from instead of re-deriving it every turn.

- Python plugin exposing 6 tools, real-time webhook and scheduled cron export; pack format is versioned and self-describing.

Hermes Project Oracle Mar 2026 – present

Deep project scanner for the Hermes agent: analyzes an unfamiliar codebase and generates AGENTS.md / CLAUDE.md context files plus structured documentation notes, so the agent starts a session already oriented.

- Python, agent plugin integration, structured documentation generation.

Experience

Full-Stack Developer & Indie Hacker, Self-employed – Lomé, Togo (remote) Nov 2024 – present

Designed, built and operate five products in production end to end — database, API, UI and billing.

- Quotask — quoting SaaS: PDF generation, e-signature, Stripe and Lemon Squeezy payments. Next.js 16, Drizzle ORM, Turso.
- LandlordKit — rental management SaaS: tenant portal, recurring Stripe billing, analytics dashboard. Next.js 16, Drizzle, Neon.
- XEARN — micro-earning platform built as a monorepo: over 40 API endpoints, 99 automated tests, admin panel. NestJS 11, Next.js 15.
- Workless — self-hosted workflow engine: React Flow visual builder, DAG execution engine, webhooks, scheduling. Laravel 11, PostgreSQL, Redis.
- Freelance engagements (Upwork, Fiverr) — technical and UX/UI audits of hotel group websites in Lomé (Sarakawa Hotel, Hôtel 2 Février): web performance, layout fixes and API corrections.

Skills

AI & agents: LLM integration, tool calling, agent memory & context engineering, RAG, MCP, agent plugins, prompt design, machine learning fundamentals

Languages: Python, TypeScript, JavaScript, SQL, Java, PHP

Backend: Node.js, NestJS 11, Express, Spring Boot 4, Laravel 11, REST APIs

Data: PostgreSQL, Neon, Turso/SQLite, Drizzle ORM, Prisma, Redis

Frontend: React 19, Next.js 16 (App Router, Server Components), TailwindCSS

DevOps: Docker, GitHub Actions, CI/CD, monorepos, Vercel, Oracle Cloud, Cloudflare Workers, Linux/Bash, Git

Education

Ascencia Keyce Togo (Africa Campus, Lomé), Bachelor's (3rd year) in Artificial Intelligence & Big Data – Lomé, Togo Sept 2026 – present

- Currently enrolled — AI and big data specialization.

Collège de Paris Supérieur, Two-year programme in Computer Science & Software Engineering – Lomé, Togo Sept 2023 – June 2025

Baccalauréat série C, Mathematics & Physics Obtained 2023

Languages

French (native). **English** (professional: open-source contributions, technical documentation, discussions).
